

Intelligent Contract Ingestion

Ease Administrative Burden & Strengthen Compliance and Obligation Management

TechnoMile's suite of Contracts solutions are purpose-built to help companies address the complex requirements of doing business with the government by streamlining and de-risking the federal contract lifecycle.

With Intelligent Contract Ingestion, powered by our platform's AI-driven data extraction capabilities, companies can upload standard contract award or solicitation documents and our AI engine's pre-trained data models intelligently extract industry-specific data and present it for the Contracts team to review, automating the creation of detailed contract records and tracking of deliverables and other obligations. This shaves hours off contract set-up activities and streamlines obligation management, easing administrative burden and strengthening your team's ability to maintain compliance throughout the contract lifecycle.

Automated Contract Creation

Automate the contract record creation process through AI-powered data extraction. TechnoMile's AI engine machine reads standard contract award or solicitation documents (such as SF-33 and SF-1449 forms) and presents the extracted data for users to review. This eliminates hours of manual data entry associated with each new award, improves your data's integrity, and allows your contracts professionals to focus on managing risk and compliance, rather than administrative tasks.

Wizard-Driven Data Validation

Use an intuitive, wizard-driven process to efficiently review machine-extracted data – including related CLINs/SLINs, ACRNs, and clauses – streamlining the validation and refinement of contract details, which saves your team significant time and helps ensure accuracy.

Efficient Clause Comparison

The system intelligently compares all extracted clauses against your platform's clause library, highlighting the percentage of each clause's content that matches your library, which allows contracts professionals to easily identify and prioritize clauses that require review. Your team can then quickly assess any discrepancies and designate the correct clause version to use. This enables efficient comparison of changes to clause language and allows contracts professionals to proactively identify changes in terms that could heighten your company's business risk. Any clauses that are unmatched or partially matched with your clause library can be captured separately for further review by your legal team.

Streamlined Management of Contract Obligations & Deliverables

Intelligent Contract Ingestion can also be used to automate obligation scheduling and management. AI-powered extraction of obligations from standard documents enables identification of deliverables, CDRLs, and other types of obligations and, when presented for validation, your contracts professional has the option to create a corresponding deliverable or task. This streamlines the capture of all obligations embedded within a contract, strengthening your team's ability to maintain compliance throughout the contract lifecycle.

Intelligent Contract Ingestion

Rapid Contract Record Updates

Companies that use TechnoMile's integrated Growth Suite to manage their pursuit of contracts can convert a Closed-Won opportunity to create a baseline contract record. Then, upon receipt of the contract award document, Intelligent Contract Ingestion can be used to rapidly update the baseline contract record with the latest information. Contract details – including CLINs/SLINs, ACRNs, and clauses – can be extracted and presented for review, speeding the creation of a comprehensive new contract record.

Bring Greater Efficiency to CPARS Response Management

Using Intelligent Contract Ingestion, your company can leverage AI-powered automation to capture CPARS evaluations within TechnoMile CLM, speeding this process. Companies can track CPARS evaluations, route them internally to efficiently gather feedback and substantiating documentation to shape responses, capture related adjudications, as well as leverage this past performance data to better inform future pursuits.

Key Features

- Automated Contract Creation
 - AI-Powered Extraction of Data from Standard Contract Award/Solicitation Documents
 - Wizard-driven Process to Validate Extracted Data
 - Capture of Embedded CLINs/SLINs, ACRNs, and Clauses
 - Intelligent Comparison of Extracted Clauses against Clause Library
- Automated Management of Obligations & Deliverables
 - AI-Powered Extraction of Deliverables, CDRLs, and Other Obligations from Standard Documents
 - Quick-Create Contract Deliverables and Tasks
- AI-Powered Ingestion of CPARS Evaluations
- Automated Contract Updates
 - AI-Powered Extraction of Data from Standard Contract Award Documents
 - Wizard-driven Process to Update Existing Contract Record with Extracted Contract Details, Including CLINs/SLINs, ACRNs, and Clauses

About TechnoMile

From go-to-market to contract closeout, TechnoMile provides transformative cloud solutions that empower companies to find, pursue, win, and retain more business with the government. With our best-in-class cloud platform, companies optimize BD and capture processes, gain unique competitive insights, source contact intelligence, automate and de-risk the contract lifecycle, and gain an information advantage that elevates enterprise performance.
