Contract Lifecycle Management

Automate Contract Management & Bolster Your Ability to Manage Compliance and Risk

Contract Lifecycle Management (CLM) is at the heart of TechnoMile’s suite of Governance Risk & Compliance (GRC) solutions that are purpose-built to help companies address the complex requirements of doing business with the government by streamlining and de-risking the contract lifecycle.

With TechnoMile CLM, clients can centrally track all contracts – both those with the government and commercial agreements – on a single, secure cloud platform that facilitates easy collaboration and information-sharing across teams and gives clients a 360° view of their business. From cradle to grave, our AI-enabled CLM streamlines management of the entire contract lifecycle for prime contracts, subcontracts, and commercial transactions, automating and systemizing workflows to drive efficiency and cost savings, and freeing up contracts professionals to concentrate on managing compliance and risk.

Streamlined Contract Creation

Clients can use CLM with TechnoMile’s integrated Growth Suite, which optimizes pre-award BD, capture, and proposal processes. This creates smooth, efficient handoffs as solicitations convert seamlessly to awards, bringing forward pre-award details to eliminate keystrokes and simplify contract creation.

AI-Powered Intelligent Contract Ingestion

Clients have the option to add on our AI-powered Intelligent Contract Ingestion module. Upload standard contract award or solicitation documents (e.g., SF-33 and SF-1449 forms) and data is intelligently extracted and presented for the Contracts team to review and create contract records – including related CLINs/SLINs, ACRNs, clauses, and deliverables – shaving hours off contract set-up activities and helping ensure that all embedded contract obligations are captured.

Configurable Clause Library

Our CLM’s configurable clause library comes pre-loaded with federal regulatory clauses, including FAR/DFARS and agency supplements. Track clauses, classify them by agency/department, and designate mandatory and flow-down clauses, which simplifies contract creation and enables clear visibility into risk across your contract portfolio.

Automated Clause Library Management

With automated clause library management, clients can check for available clause revisions or updates on acquisition.gov and automatically update their CLM’s clause library, removing the burden of manually maintaining clauses and helping to ensure the most recent language is available for compliance review.

Document Management

With our SharePoint Connector, clients have a single, online repository for each contract’s related documents and files, organized into a standard folder structure, making it fast and easy to find and share documents such as solicitations, RFPs, and standard forms for DoD and civilian agencies.

Integrated Agreement Management

Clients have the option to use our integrated Agreement Management solution to support efficient creation, negotiation, and execution of commercial agreements – such as NDAs, PIAs, TAs, SOWs, MSAs, and subcontracts. Managing both sell-side and buy-side obligations on a single platform enables more effective management of risk and compliance as clients establish partner, subcontractor, and supplier agreements and seamlessly flow down clauses.
Contract Lifecycle Management

Respond to data calls with ease and accuracy and ensure audit-readiness.

Details & Required Reporting at Your Fingertips
CLM puts real-time information and details about contracts at your fingertips – role-based dashboards, search capabilities, and a centralized document library make it fast and easy to respond to data calls from customers and internal business partners. Easily generate required reporting for DCAA, DCMA, GSA, SBA, and others and confidently demonstrate compliance to auditors.

KPI Visibility
Leave behind time-consuming attempts to piece data together in Excel and leverage CLM’s library of best practices-based reports to produce accurate, real-time reports in one-click and get easy visibility into contract end dates, risky clauses, contract value and funding, contract milestones, status of deliverables, subcontracts, and more. Quickly and easily build or modify dashboards and reports to suit your business’s unique needs.

One-Click Document Creation
One-click document creation allows you to rapidly generate routine required documents, such as Standard Contract Briefs and Limitation of Funds letters, saving contracts professionals time and helping ensure continued compliance.

Safeguard against compliance gaps.

CLIN/SLIN/ACRN and Mod Tracking
Easily track and report on changes to available funding based on CLIN/SLIN/ACRN, gaining easy visibility into funding status and helping your organization avoid overspending and additional overheard cost due to non-compliance. Capture modifications as they occur, ensuring continued compliance and keeping your entire team on the same page when changes to period of performance, deliverables, or funding occur.

Subcontract Management and Flow Downs
Streamline creation of subcontract agreements with TechnoMile’s integrated Agreement Management solution. Track all subcontracts and modifications throughout the lifecycle of a contract and then digitally manage the closeout process. Designation of prime terms and government flow downs to subcontractors within your CLM’s clause library ensures that mandatory clauses on prime contracts are automatically added to subcontracts in compliance with mandatory clause flow-down requirements.

Labor Category Requirement Tracking
Quickly bulk upload labor rates, providing visibility into the rates incorporated into each contract and which wage determination they may be subject to, as well as insight into labor rates across your entire portfolio of contracts. Labor rates can also be easily added to any associated subcontracts.

AI-Driven CDRL & Deliverable Tracking
Track CDRLs and other deliverables and report on their delivery status, providing visibility into compliance with deliverable schedules and helping to safeguard against compliance gaps. TechnoMile’s integrated AI-driven Intelligent Contract Ingestion solution can be used to machine-extract CDRLs, deliverables, and other obligations from standard documents for tracking within the CLM, streamlining their capture and strengthening your team’s ability to maintain compliance throughout the contract lifecycle.
Limitation of Funds Automation

Bring ease and efficiency to monitoring of contract actuals to help ensure timely, compliant Limitation of Funds (LOF) action. TechnoMile CLM estimates future contract burn and, when the LOF threshold is exceeded, notifies the contract manager, who can rapidly generate an LOF letter from the system to send to the government contracting officer.

Contract Closeout Checklists

Initiate and manage the closeout process for prime and subcontracts digitally, ensuring all required closeout tasks are completed and documented in compliance with FAR and any agency-specific requirements and timeframes. Configure contract closeout task lists to align with your business’s unique needs, assign closeout tasks to users, and easily track and capture an audit trail of completion.

Eliminate hidden risk in contracts.

Visibility into Risky Clauses

With TechnoMile CLM, clients can readily identify and report against risky clauses – as uniquely defined by your business – that are embedded within your portfolio of contracts, helping to eliminate hidden risks and enabling proactive risk mitigation.

OCI Vetting

Initiate an OCI vetting process using our configurable OCI questionnaire and dynamic review and approval workflows, plus create and track adjudications and capture mitigation plans as needed, equipping you to identify potential OCI during the pre-award stage, implement appropriate mitigations, and capture an auditable history of these efforts. This helps your company avoid the significant legal, financial, and reputational risks associated with non-compliance.

Side-by-Side Clause Comparison

With automated clause library management and easy side-by-side comparison of changes to clause language, contracts professionals can efficiently and proactively identify changes in terms that could heighten the client’s business risk and may necessitate further internal review or escalation.

Invest in technology designed for growth.

One Platform from Go-to-Market to Contract Closeout

With TechnoMile’s integrated Growth and GRC Suites, clients can manage both pre- and post-award activities on a single, cloud-based platform. Tightly connecting these workflows enables smooth, efficient handoffs as solicitations convert seamlessly to awards, and allows clients to gain a data-driven understanding of contract past performance to inform smart future opportunity pursuits and more effective management of risk and compliance.

Best-in-Class User Experience

Deployed on top of a world-class SaaS platform – either Salesforce or Microsoft Dynamics 365 – our solution layers TechnoMile’s unique, best-in-class capabilities for managing the complexities of government contracting onto a best-in-class SaaS solution and user experience.
Highly Secure
As a natively-built application, CLM can be deployed in a Salesforce or Microsoft SaaS/PaaS environment that is FedRAMP-authorized (Moderate or High), enabling your organization to meet FedRAMP and CMMC compliance objectives and satisfy highly stringent cloud security requirements.

Future-Proof Solution
Regular product releases provide you with a steady stream of innovative product enhancements as market needs and technologies advance, helping to future-proof your TechnoMile investment. In addition, our solutions are built on highly flexible platform technology that enables easy configuration and the ability to extend our solutions with low-code/no-code development. This makes it easy to make changes in-house and gives clients the ability to adapt their solution on their own to support emerging business needs.

Key Features
- OCI Vetting
- Clause Library Pre-Loaded with Federal Regulatory Content
- Automated Clause Library Management
- CLINs, SLINs, ACRNs Tracking
- Labor Category & Rate Tracking
- Modification Tracking
- CDRL & Deliverable Tracking
- Limitation of Funds Automation
- Subcontract Management & Flow Down Tracking
- Small Business Planning & Reporting
- One-Click Document Creation (e.g., Standard Contract Briefs)
- CPARS Response Management
- Contract Closeout Management
- Dashboards & Report Library
- Growth Suite Integration
- Intelligent Contract Ingestion Integration
- Agreement Management Integration
- ERP & Document Repository Integration
