Powered by TechnoMile ElevateAI Service

## Drastically Streamline Intake of Prime & Subcontracts

TechnoMile's suite of Contracts solutions are purpose-built to help companies address the complex requirements of doing business with the government by streamlining and de-risking the federal contract lifecycle. With TechnoMile's Transform Copilot, companies can digitize federal prime or subcontracts and our pre-trained models intelligently extract industry-specific data and present it for the Contracts team to review, automating the creation of detailed contract records in TechnoMile CLM. This shaves hours, if not days, off contract intake activities and frees up your contracts professionals to focus on higher-value activities.

## The Industry's Most Accurate, Trustworthy Results

Transform Copilot is powered by TechnoMile ElevateAI Service. ElevateAI Service infuses our TechnoMile platform with the power of generative AI and best-in-class Large Language Models, underpinned by domain-trained technologies. This frees contractors from the limitations of legacy solutions that rely on highly structured data. And, because TechnoMile is the only CLM vendor that trains its AI/ML models using industry-specific forms, subcontracts, and purchase orders, as well as leverages industry-specific prompts, our AI-powered solutions deliver the most accurate, trustworthy outputs for GovCon and Aerospace and Defense companies. Built on leading Microsoft Azure technology, all ElevateAI Service components are hosted in a GCC High environment, supporting clients' compliance with stringent data security requirements.

## Flexible, Effortless Contract Digitization

Transform Copilot machine-reads any type of prime contract award or solicitation form, as well as federal subcontracts and purchase orders, and presents the extracted data for your contracts professionals to review. This eliminates hours of manual data entry associated with each new award, improves your data's integrity, and allows your team to focus on managing risk and compliance, rather than administrative tasks.

## Friendly, Efficient Data Validation

The copilot efficiently guides your contracts professionals through review of all machine-extracted contract details – including CLINs/SLINs, ACRNs, and clauses – using an intuitive, side-by-side view that identifies exactly where each data point was extracted from the original document. Users can conversationally query the document to find additional details they want to capture from the contract and easily map them to the corresponding fields in the CLM. This process streamlines validation and refinement of contract data, saving your team significant time and ensuring accuracy.

## Intelligent Clause Comparison

The copilot intelligently compares all extracted clauses against your CLM's clause library, highlighting the percentage of each clause's content that matches your library, which allows contracts professionals to easily identify and prioritize clauses that require review. Your team can then quickly assess any discrepancies and designate the correct clause version to use. This enables efficient comparison of changes to clause language and allows contracts professionals to proactively identify changes in terms that could heighten your company's business risk. Any clauses that are unmatched or partially matched with your clause library can be captured separately for further review by your legal team.

# Transform Copilot

## Rapid Contract Record Updates

Companies that use TechnoMile's integrated Growth Suite to manage their pursuit of contracts can convert a Closed-Won opportunity to create a baseline contract record. Then, upon receipt of the contract award document, Transform Copilot can be used to rapidly update the baseline contract record with the latest information. Contract details – including CLINs/SLINs, ACRNs, and clauses – can be extracted and presented for review, speeding the creation of a comprehensive new contract record.

## Key Features

- Automated Contract Creation
  - AI-Powered Extraction of Data from Standard Contract Award/Solicitation Documents
  - Wizard-driven Process to Validate Extracted Data
  - Capture of Embedded CLINs/SLINs, ACRNs, and Clauses
  - Intelligent Comparison of Extracted Clauses against Clause Library
- Automated Management of Obligations & Deliverables
  - AI-Powered Extraction of Deliverables, CDRLs, and Other Obligations from Standard Documents
  - Quick-Create Contract Deliverables and Tasks
- AI-Powered Ingestion of CPARS Evaluations
- Automated Contract Updates
  - AI-Powered Extraction of Data from Standard Contract Award Documents
  - Wizard-driven Process to Update Existing Contract Record with Extracted Contract Details, Including CLINs/SLINs, ACRNs, and Clauses

## About TechnoMile

From go-to-market to contract closeout, TechnoMile provides transformative cloud solutions that empower companies to find, pursue, win, and retain more business with the government. With our best-in-class cloud platform, companies optimize BD and capture processes, gain unique competitive insights, source contact intelligence, automate and de-risk the contract lifecycle, and gain an information advantage that elevates enterprise performance.
