

GovSearch NoticesIQ

Streamline & Optimize Your Task Order Workflows

GovSearch NoticesIQ unifies all your company's task order notices into a single workflow and provides valuable, AI-powered opportunity insights, enabling business development, capture, and GWAC/IDIQ teams to efficiently evaluate new task order opportunities and empowering smart bid decisions.

Consolidate All Notices into One Workstream

GovSearch NoticesIQ is your organization's hub to manage task order notices. Our solution ingests all task order email notices your organization receives from the government, as well as notices from any contract vehicle portal that employs standard security protocols, mitigating the risk of missed notices and eliminating the headache of visiting multiple sites. GovSearch NoticesIQ includes integrations with top portals – including eBuy, eGos, Symphony, and others – with the flexibility to add custom portal connections to support a client's unique range of contract vehicles.

Leverage the Power of AI to Prioritize

GovSearch NoticesIQ applies TechnoMile's proprietary, AI-powered algorithm to your company's publicly-available past performance details to generate a Clarity Score for each new task order notice. All new notices are incorporated into a single workstream that surfaces the highest-relevancy task orders to your team first, focusing them on the strongest opportunities.

Understand Details without Digging

GovSearch NoticesIQ employs domain-trained AI to review each notice, along with all its attached documents, and summarize key details about the task order, including required capabilities. So, rather than digging through attachments, your team members already have the information at hand to rapidly qualify task order leads, saving significant time.

Gain Historical Award Context

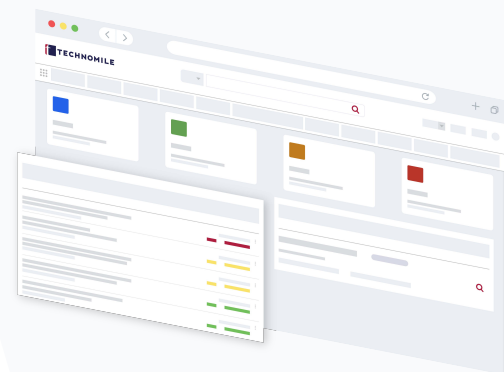

Equip your team with valuable intelligence that informs smart bid decisions. When a task order notice is a re-compete or if similar, legacy awards exist, GovSearch NoticesIQ offers access to analyst-curated research and award details, putting key information about the incumbent and prior solicitation details and documents at your team's fingertips.

See Details That Matter to You

In addition to displaying critical details about each task order – the customer, what's being purchased, key deadlines, and points of contact – GovSearch NoticesIQ can use AI to capture and display client-specific custom fields with details that matter exclusively to your company when qualifying task orders (i.e., special requirements).

Strengthen Team Collaboration

Centrally capture notes about a task order notice for visibility across your team and easily notify colleagues about relevant new opportunities. This enables easy collaboration as you triage and qualify new notices, offering a superior alternative to siloed communication in tools like email or Slack.

Unlock Powerful Workflows & Analysis

When your team identifies a relevant notice, they can tag it with one click and auto-create the new lead – called a “Spark” – in your CRM, with the option to download related files. Sparks can be used to automate BD and capture workflows and analyze your company’s bid/no-bid trends and performance on specific contract vehicles.

Satisfy Rigorous Security Requirements

GovSearch NoticesIQ is hosted in AWS GovCloud, allowing TechnoMile to store task order notices with attachments containing CUI in our platform. All ingested notices are evaluated by our AI model and flagged when potential CUI is detected, alerting your team to CUI handling considerations in support of your company’s compliance with information security requirements.

Access Federal Market & Contact Intelligence

GovSearch NoticesIQ includes access to GovSearchAI, TechnoMile’s market and contact intelligence platform that consolidates and enriches data from top federal sources. Using GovSearchAI, you can identify best-fit opportunities, find potential partners, conduct market and competitive analysis, locate the right government contacts, and sharpen your win strategies.

Key Features

- Integration with eBuy, eGos, and Symphony portals
- Custom portal integrations* (add-on service)
- AI-powered email notice ingestion, including attachments*
- Ability to capture custom fields (AI-sourced)*
- CUI document handling
- AI-driven task order recommendations
- Access to legacy task order details (e.g, incumbent, documents)*
- Centralized view of all new task orders
- Ability to filter, sort, and create saved searches
- Intelligent capability tagging
- Competitor and partner research
- Team collaboration
- One-click conversion to Sparks (i.e., leads) with CRM integration
- Email alerts and notifications
- Access to federal market and contact intelligence platform
